

Learning about Contour Lines

4 Figure Grid Reference 7798 from OS Explorer 167 Thornbury, Dursley & Yate

Make a cardboard contour sculpture using these contours at 20m vertical intervals.

1. First cut out the paper square from the template on the next page. Cut a square of corrugated card the same size as the above square as the base.
2. Then, cut off the area marked 1 (from the paper) and trace the shape that is left on to a similar square of card, cut around and stick on top of the original square.
3. Next cut off the two areas marked 2. Trace the new shape on to another piece of card. Stick the new card on top
4. Next cut off the area marked 3. Trace the new shape on to card and stick it on top of the sculpture
5. Repeat till you get to the top.
6. Paint the whole hill green. Then, if you want, paint on some features starting with the road and footpaths, rivers etc.
